

CBIG-SCREEN is an EU-funded project that aims to reduce inequality by improving the offer of cervical cancer screening to vulnerable groups of women. Though cervical cancer screening programmes drastically reduce cervical cancer mortality, they remain largely inaccessible and underused by subpopulations of vulnerable women, exacerbating inequality.

Within CBIG-SCREEN, we will adapt established intervention models, for instance HPV self-sampling, to local context of three pilot countries (Estonia, Portugal, and Romania) to increase access to cervical cancer screening in subgroups of vulnerable women.

How can you contribute?

- ◆ Are you a **staff member** or **volunteer** of an **organisation working with vulnerable, marginalised and/or underserved groups** (e.g. the homeless, prisoners, sex workers)? Then, you can help us better understand the needs and wants of the people you work with and with whom we wish to co-create strategies to make cervical cancer screening more accessible and acceptable to them.
- ◆ Your participation in this project can be important to **help us take different experiences and perspectives** about cervical cancer screening **into account**, to adapt established intervention models to local contexts. **Your expertise is important and valued.**

If you are interested in this project, you may:

- ◆ **Be a member of an advisory board** (collaborative user board). As a member of a collaborative user board you will be encouraged to contribute your perspectives on challenges and possible solutions to increase cervical cancer screening uptake in a constructive dialogue with other representatives of actors engaged in cervical cancer screening.
- ◆ You can also get involved by sharing your experiences, ideas, and publications with us!

To get involved, or to find out more, please email cbigscreen@gmail.com

The CBIG-SCREEN project has received funding from the EU Horizon 2020 research and innovation programme under Grant Agreement No 964049
